

Create **react.js** and **angular** web application
Application allows user to add, edit and delete the notes

Notes add by selecting colour

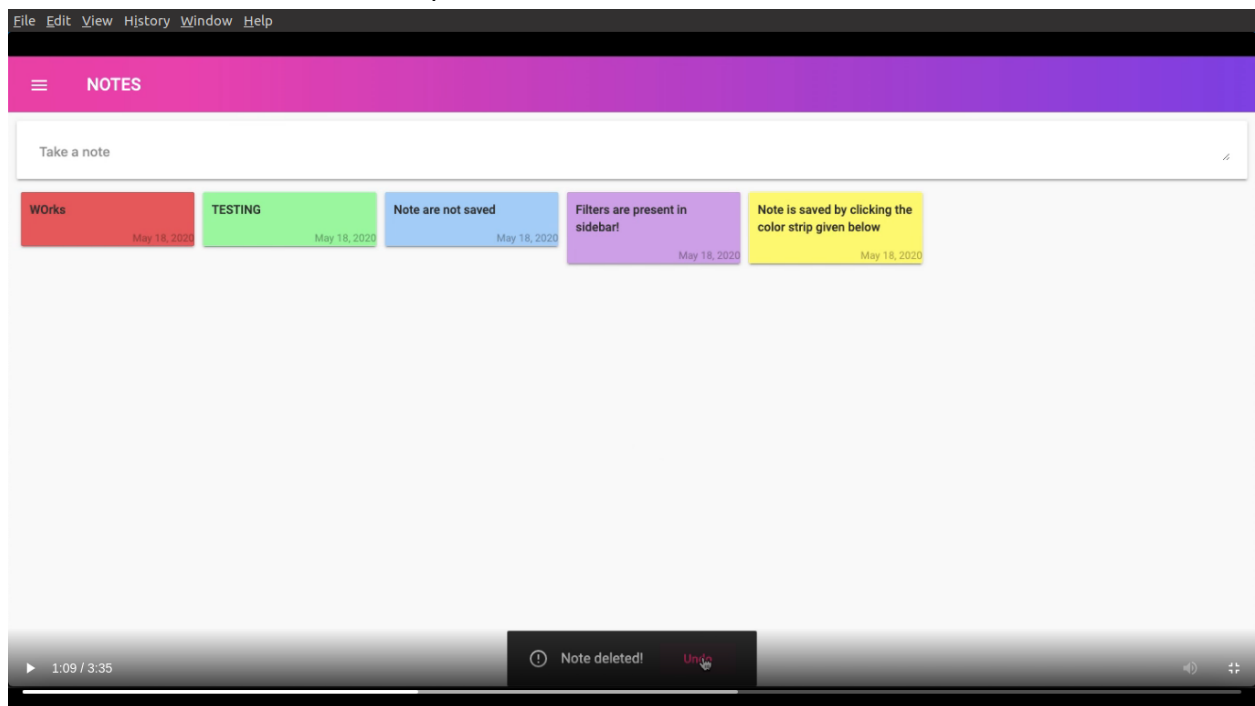

After adding notes display notes like above image

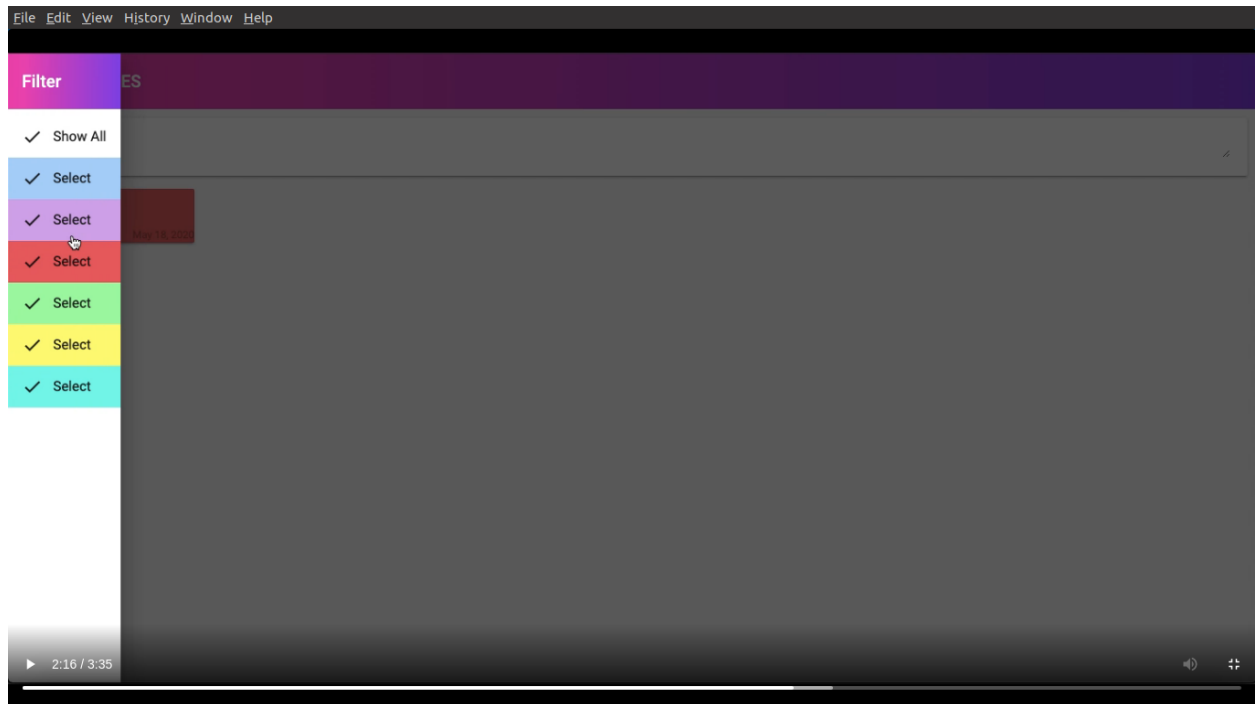

Allow edit or delete notes (also change colour of notes in edit)

In delete notes also allow undo option

Filter notes by colour

Display selected colour notes only

Store data in localStorage with redux in react and ngrx in angular

Notes:

- Use from validations where needed
- Use any of this for UI: Bootstrap or Material or html
- add confirmation message on if needed
- Use any third party library to display Notifications
- And display notifications after any action is made
